II-32 Circular and carbon-free economy: road map for harmonizing national and European standards for energy market: monograph: 2021, 153 p.

ISBN 978-83-963452-1-9

The monograph examines the European Green Deal essence and the mechanism of its implementation. The authors conducted a cross-regional analysis of energy efficiency among European countries. The EU experience with the European Green Agreement was studied. The monograph generalized the approaches to implementing the principles of circular and carbon-free economies to make rational managerial decisions on a set of measures and tools for step-by-step convergence of Ukraine's energy policy with European standards. This study would contribute to developing the roadmap for harmonizing Ukrainian and European energy market regulation standards towards the transition to a circular and carbon-free economy.

The monograph is generally intended for government officials, entrepreneurs, researchers, graduate students, students of economic, environmental, and some other specialties.
